Winter Operations Directive 2028/29

Doc. NS-CFO-WOD-2028-29 · 28 September 2028

Classification: Internal, installation managers

1. Purpose

This directive sets out the arrangements for the winter operating period from 1 November 2028 to the end of the spring crew change. It applies to installation managers in the Legacy Sites programme and to the Platform Supervisor of Ødemark A.

2. Crew and rotation

- Crews sign on for the full season. Regular crew changes are not planned and will be made only for medical or operational reasons.
- Helicopter transfers are limited to medical and operational needs. Requests are made to the installation manager and logged.
- Supply runs continue from the shore base when weather allows. Stocks of consumables must cover at least 21 days without resupply.

3. Health and welfare

- The installation medic reviews each crew member at the start of the season and at monthly intervals.
- Daylight-lamp schedules apply from the first week of November. Families may contact the shore contact team at any hour.
- Medical evacuation criteria are unchanged. The medic decides, and the installation manager confirms the transport.

4. Standby and escort

Standby and escort arrangements for the winter period are covered by contract Cardume. Installation managers do not need to take action. Questions go to Clinical Field Operations.

5. Reporting

Installation managers report weekly to Clinical Field Operations using the standard status sheet and immediately for any incident that may affect the study programme.
