BOREAS-2 Informed Consent Form for Crew, v1.1

Doc. NS-CA-BS2-ICF-v1.1 · 30 August 2028

Classification: Study confidential

Study: BOREAS-2 · Site: Ødemark A · Investigator: Installation medic

Why am I being asked?

You work a long winter rotation on an offshore installation. We are asking whether you would like to take part in a study of a medicine called NS-760 that may help people keep their attention and memory steady during long periods of isolation and disturbed sleep.

What does taking part involve?

- You take one capsule a day for the length of the rotation. It contains either NS-760 or a placebo. Neither you nor the medic will know which you get.
- You see the medic once a week for a short check and to collect your capsules.
- You complete short computer tests on a tablet at fixed times, and wear a wrist sensor to record sleep.

Is taking part voluntary?

Yes. You can decide not to take part, or stop at any time, without giving a reason. Your decision has no effect on your job, your pay or your rotation. Your employer is not told whether you take part.

Risks and benefits

NS-760 is an investigational medicine. Side effects seen so far include headache, nausea and difficulty sleeping. You may not benefit personally. The study may help other people in the future.

Your data

Your study data are coded. Your name is held only by the medic. NeuroStat and the authorities may see coded data. See the privacy information for details.

Consent

I have read this form and had the chance to ask questions	■ Yes
I agree to take part in BOREAS-2	■ Yes
I agree that my coded data may be used as described	■ Yes
