BOREAS-2 Coordination Notice: Ødemark A

Doc. NS-CA-BS2-CN-001 · 12 September 2028

Classification: Internal, installation managers

NEUROSTAT
STUDY CONFIDENTIAL

To: Platform Supervisor, Ødemark A · From: Office of Clinical Affairs

1. Background

BOREAS-2 is a Phase II, randomised, double-blind, placebo-controlled study of NS-760 in adults working extended winter rotations at high latitude. Ødemark A has been enrolled as a study site. Recruitment began on 14 September 2028.

2. What this means for the platform

- The installation medic is the local study investigator. Study procedures are carried out in the medical room.
- Participation is voluntary and is a matter between the crew member and the medic. The installation manager does not take part in enrolment and is not told who participates.
- Study materials are delivered with the regular supply run and stored in the medical room under the conditions on the delivery note.
- Crew members who participate keep working their normal schedule. There is no change to duties, rest periods or safety responsibilities.

3. Communication to the crew

The Office of Clinical Affairs has sent an information note to the installation medic. Please do not discuss the study with the crew. Questions from crew members are referred to the medic.

4. Contacts

Office of Clinical Affairs, NeuroStat Holding AG: clinicalaffairs@neurostat.ch. For operational matters on the platform, contact Clinical Field Operations.
